

Please add the following claims:

--13. A method of identifying agents that regulate the transcriptional activity of human AR or ER β , comprising:

contacting a cell expressing human AR or human ER β , and human SLIM, or biologically active polypeptides having at least 90% sequence identity thereto, with a test agent; and

determining whether said test agent regulates the transcriptional activating activity of human AR or Er β .

A²

14. The method of claim 13, wherein said polypeptides have at least 95% sequence identity to AR, ER β and/or SLIM.

15. The method of claim 13, wherein said polypeptides have at least 98% sequence identity to AR, ER β and/or SLIM. --
